DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art (APA) in view of Ohta et al. US Patent No. 5,673,127.

The APA discloses in fig. 5 a liquid crystal display device including an under light type back light unit in which light emitted from a plurality of linear light sources 4 is reflected by a reflecting sheet 5 disposed at a rear side of the plurality of linear light sources, then transmitted through a light modulation film 9 and a light diffusion plate 7 to form a planar light source with a uniform luminance thereby to indirectly irradiate a liquid crystal panel 8 from a rear side thereof, but omits a light source shielded by a light shield.

Ohta et al disclose (see figs. 4-6 and col. 8, lines 24-36) a light emitted from a linear light source 1b shielded by a light shielding plate 17 and transmitted only through the guiding plate 15.

Therefore, it would have been obvious to one skilled in the art at the time the invention was made to incorporate the teachings of Ohta with the APA, since that would prevent the face luminance around the linear source which is shielded by a light

shielding plate from becoming extremely higher than other portions of the display are as taught by Ohta et al.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nishimura (JP 6-75217) discloses an LCD including an under light type backlight unit.
